- 1. Apply two drops of Loctite to the ends of the threads on each 1/4"-20 Button Head Screw.
- 2. The largest petal section should be orientated to the top right. With the T27 Driver fasten the Aluminum Petal with HDPE Guards to the Post by driving one at a time the 1/4"-20 Button Head Screws through one of the holes on the Guards, through the Petal, and into the threaded hole on the Post. Drive slowly to prevent stripping the screw or threaded holes.
- 3. After all the Screws have been installed, go back and tighten them down until the head of the screw just starts to sink into the green HDPE Guard face.

- 1. With the remaining Loctite, apply a couple drops to the end of the threads on the 3/8"-16 Hex Head Screws.
- 2. Attach the Instrument Pre-Assembly to the In Ground Post Extension by aligning the holes on each component and fastening them together with the (3) 3/8" Hex Head Screws and the (3) 3/8"-16 Hex Nuts.
- 3. Excavate one 10" diameter hole, 36" deep, at the installation location. Be sure to account for surfacing thickness if it is to be used.
- 4. With two people, lower Instrument with Post Extension attached into the excavated hole. Verify correct placement and levelness of the Instrument. Check for sufficient clearance around the Instrument, a 36" perimeter around the Instrument is recommended for wheelchair accessibility.
- 5. Last pour concrete around the In Ground Extension. If necessary, brace the Instrument to hold it rigid while the concrete cures. Leave to set according to the concrete manufacturers guidelines. Approximately (3) 80lb. bags will be needed.

- 1. Determine installation location. Verify concrete pad is a minimum of 24" long x 24" wide x 6" thick. If the concrete pad is at an angle, steel washers are required to act as shims (Shims not provided). If there is not already an existing pad, approximately (4) 80lb. bags will be needed. Allow concrete to cure per concrete manufacturers guidelines.
- 2. With two people place the Instrument Assembly onto the concrete pad and mark the center of the holes on the surface mount base. After you have made your marks, set aside the Instrument in order to drill for anchor holes. With a hammer or rotary drill, drill through concrete at marked locations. Drill to a minimum depth of 4". A 3/8" masonry drill bit will be needed.
- 3. Place the Instrument back over the drilled out holes. Insert provided anchor bolts into aligned holes. Position anchor nut so that it is flush with the top of the bolt. Pound anchor bolts into the hole until the anchor washer is flush with the surface mount base. Tighten anchor bolts until they are snug. Cover remaining bolt sections with provided nut caps.
- 4. Verify the correct placement, levelness, and finished height of the Instrument. Check for sufficient clearance around the Instrument, a 36" perimeter around the Instrument is recommended for wheelchair accessibility.
- 5. If installing onto wet concrete, us the wet set anchor manufacturers guidelines for installation procedures.
